Description

Get-FloppyController will provide you the information about the capabilities and management capacity of a floppy disk drive controller.

Get-FloppyController is not available for use as of Windows 10 and Windows Server 2016.

Note: You need to install SysInfo module in order for this cmdlet to be available. For more information, see [PowerShell Module SysInfo](#).

Syntax:

Get-FloppyController

```
[[-ComputerName] <String[]>]
[[-Protocol] <String>]
[[-Properties] <String[]>]
[<CommonParameters>]
```

Requirements

- SysInfo PowerShell Module
- WinRM Enabled and PowerShell 3.0 (only if you use WinRM protocol)

If you want to find more about the specific cmdlet while you are in PowerShell you can use the below to get the help file.

Code:

Get-Help Get-FloppyController

Output:

We use cookies to ensure that we give you the best experience on our website. If you continue to use this site we will assume that you are happy with it.

```
PS C:\Windows> Get-Help Get-FloppyController

NAME
    Get-FloppyController

SYNOPSIS
    Gets the capabilities and management capacity of a floppy
    disk drive controller.

SYNTAX
    Get-FloppyController [[-ComputerName] <String[]>] [[-Protocol] <String>] [[-Properties] <String[]>] [<CommonParameters>]

DESCRIPTION
    Gets the capabilities and management capacity of a floppy
    disk drive controller and converts all codes in results into
    human readable format. Get-FloppyController is not available
    for use as of Windows 10 and Windows Server 2016.

REMARKS
    To see the examples, type: "get-help Get-FloppyController -examples".
    For more information, type: "get-help Get-FloppyController -detailed".
    For technical information, type: "get-help Get-FloppyController -full".
    For online help, type: "get-help Get-FloppyController -online"
```

Now lets see few examples about **Get-FloppyController**.

[adinserte name="In Article"]

Examples

Example 1

This command gets the information from local system.

```
PS C:\> Get-FloppyController
```

Example 2

This command gets the information from Server1.

```
PS C:\> Get-FloppyController -ComputerName Server1
```

Example 3

We use cookies to ensure that we give you the best experience on our website. If you continue to use this site we will assume that you are happy with it.

Ok

```
PS C:\> Get-FloppyController -ComputerName "192.168.0.5"
```

Example 4

This command gets the information from Server1, Server2 and Server3.

```
PS C:\> Get-FloppyController -ComputerName Server1,Server2,Server3
```

Example 5

This command gets the information from Server1 and will output only Name and Status Properties.

```
PS C:\> Get-FloppyController -ComputerName Server1 -Properties Name,Status
```

Example 6

This command gets the information from Server1 and will output all properties.

```
PS C:\> Get-FloppyController -ComputerName Server1 -Properties *
```

Example 7

This command gets the information from Server1.

```
PS C:\> "Server1" | Get-FloppyController
```

Example 8

This command gets the information from Server1 using DCOM protocol.

```
PS C:\> Get-FloppyController -ComputerName Server1 -Protocol DCOM
```

Ok

Optional Parameters

- **-ComputerName**
 - Description: Specifies the computer names or IP Addresses of the systems that we want to get the information from.
 - Required: False
 - Position: 1
 - Default value: None
 - Accept pipeline input: True (ByValue)
 - Accept wildcard characters: False
- **-Protocol**
 - Description: Specifies the protocol that will be used to get the information from the remote system.
 - Accepted Values: DCOM or WinRM
 - Required: False
 - Position: 2
 - Default value: None
 - Accept pipeline input: False
 - Accept wildcard characters: False
- **-Properties**
 - Description: Specifies the object properties that appear in the display and the order in which they appear. Wildcards are permitted.
 - Required: False
 - Position: 3
 - Default value
 - Accept pipeline input: False
 - Accept wildcard characters: True

Inputs

System.Array.

Get-FloppyController can accept a string value to determine the

We use cookies to ensure that we give you the best experience on our website. If you continue to use this site we will assume that you are happy with it.

Ok

System.Object.

Get-FloppyController returns an object containing all the information that has been retrieved.
